

Table 1

Demographic data and mean WISC-IV index scores for each experimental group

Demographic and IQ variables	Experimental Group		
	22q11.2 Deletion Syndrome	Typically developing control	Low-IQ community control
<i>N</i>	31	26	17
(<i>M, F</i>)	(15, 16)	(14, 12)	(6, 11)
Age	11.26 (3.09)	11.85 (2.73)	12.12 (2.47)
Full Scale IQ	70.18* (11.82)	100.12*† (7.30)	70.12† (11.06)
Verbal Comprehension Index	74.09* (12.09)	99.00*† (7.31)	69.41† (13.44)
Perceptual Reasoning Index	73.09* (11.09)	102.54*† (9.56)	71.71† (9.97)

Note: Age and WISC-IV index scores are reported as group means with standard deviations in parentheses. All participants are of White Irish or White British ethnicity. *Comparison between 22q11DS and TD control groups, $p < 0.0001$. †Comparison between TD and low-IQ groups, $p < 0.0001$. Age and gender comparisons were non-significant ($p \geq 0.05$).
