December 1991

A census of population was carried out on the night of 21st of April 1991. The increase in the population of Ireland which had continued from 1961 to 1986 has been halted and reversed - the population fell by approx. 0.5% during the 5 year period 1986 to 1991. This fall was due to the net outward migration of 136,500 persons since 1986 which exceeded the natural increase in population (excess of births over deaths) by some 17,242.

This report and the accompanying tables show the net changes which have occurred in the Eastern Health Board (EHB) area between 1986 and 1991 at both community care area level and at DED level, and also gives an age profile of the community care areas in 1991. It should be noted that the age classification is based on year of birth rather than on actual age. These are preliminary figures based on data compiled by the census enumerators during fieldwork and are subject to revision. The figures are not for publication and are supplied by the Central Statistics Office only for internal use by the Eastern Health Board.

Population changes in Community Care Areas

The population of every health board region in the country fell between 1986 and 1991 with the exception of the EHB which increased by 12,238 (1%) from 1,232,238 to 1,244,476. This increase was by no means evenly spread - seven community care areas had a net increase in population and three had a net fall. The largest increase was in Area 9 (Kildare) where the population increased by 6,398 (5.5%) and the largest fall was in Area 7 where the population fell by 4,714 (-3.9%) (see table 1 and Figs 2 & 3).

Community Care Area 8 remains the largest of the areas (total population 188,600) although it only increased by 0.4% since 1986 while Area 3 remains the smallest (total population 89,097) (Fig 1).

Tables 2,3 and 4 show the number of persons, females and males in each community care area classified into age groups based on year of birth.

Population changes in DEDs

Table 6 and maps 1-4 show the net change in population in individual DEDs between 1986 and 1991. Table 6 is sorted in

descending order of net change in population so that the DEDs with the greatest growth are at the top of the table and those with the greatest fall in population are at the end of the table.

Large net increases have occurred in the Celbridge, Leixlip and Maynooth areas of north Kildare and also Naas and Newbridge. In Wicklow there was marked growth around Bray and Greystones. It should be noted that Kilmacanogue DED was divided into two parts in the 1986 census reports but was treated as 1 unit in 1991.

In Dublin the main growth areas were in the suburbs to the west - Clondalkin, Lucan, Blanchardstown, Castleknock, the north - Swords, Kinsaley and Malahide and the south - Firhouse, Ballyboden, Glencullen, and Shankill. There was some growth nearer the city also - Ballyfermot, Clonskeagh and Grace Park.

If we examine the data at the end of Table 6 and also maps 1-4 it is clear that there has been a marked fall in population in the Dublin Corporation area and to a lesser extent in the southern parts of Kildare and Wicklow. The overall fall in population of the Dublin Corporation area between 1986 and 1991 was approx. 25,000 whereas the Dublin County grew by approx 28,000. These changes are probably due to a combination of factors including migration of people from city to county, the location of many young and expanding families in the new suburbs and emigration abroad. Arran Quay B ward had the largest fall in population between 1986 and 1991 - a drop of 1,004 (34.1%). In 1986 approx 50% of the population of Arran Quay B resided in institutions (St Brendan's and St Laurence's hospitals). The EHB's policy of promoting community-based care for psychiatric patients has been very successful in reducing the number of inpatients in St Brendan's and this combined with the closure of St Laurence's hospital explains the dramatic fall in population of Arran Quay B.

Changes in the population aged over 65

Table 5 shows the changes which have occurred between 1986 and 1991 in the over 65 population. This has increased by 6,530 (6%) and there are now 114,845 persons aged over 65 in the EHB area. The largest net increase in over 65s was in Area 8 (1,783), whereas Area 7 experienced a slight fall - (-27).

Table 7 shows the net change in the population of over 65s by DED and it is similar to Table 6 in that it is sorted in descending order of net change in population. Thus the DEDs with the greatest growth in population of over 65s are at the top of the table and those with the greatest fall are at the end. It may be seen that the fall in population in Arran Quay B noted above included a drop of 481 people over 65 while Beaumont B ward increased by 255 - probably largely due to the opening of Beaumont hospital.

Acknowledgements

We wish to acknowledge Aidan Punch, Pat Fanning and Joe Tracey of the Central Statistics Office for making this data available to the Eastern Health Board so soon after the completion of the 1991 census.
